

# Your journey to seamless Secure SD-WAN

## JOINT VALUE

Your secure and  
customized net-  
work with world-  
class service

## About Swiss Global Communications

SGC is your partner to connect your remote locations all over the world. Thanks to Satellite & Hybrid connectivity managed by SGC, all your sites will enjoy seamless integration into your organization's IT infrastructure.

## About Open Systems

Open Systems is a secure access service edge (SASE) pioneer that enables organizations to connect to themselves, to the cloud, and to the rest of the world. With cloud-native architecture, secure intelligent edge, hybrid cloud support, 24x7 access to level-3 engineers, and predictive analytics, the Open Systems SASE delivers a complete solution to network and security.

## Make your agile network reliable in the most exotic locations

With Secure Access Service Edge (SASE) on top of satellite access solutions, Open Systems and Swiss Global Communications together build a robust and cost-effective hybrid global network, from edge to cloud. Fully enabling your business transformation from planning to operations.

## Challenge

### Connectivity

Increasingly, remote and mobile workforces rely on a myriad of devices, all needing access to data and applications and many looking to connect to enterprise networks from everywhere.

### Security

More users, devices, applications, services and data reside outside of an enterprise than inside. This trend puts sensitive data and core business applications outside corporate IT infrastructure.

### Performance

Remote users often encounter performance issues due to network and service chain latencies.

### Visibility

IT teams may implement security policies based on incomplete information only to later face the challenge to keep those policies up to date.

## Solution

- Global connectivity to any place on earth, taking care of telecommunication licenses, import procedures and on-site maintenance
- 100% pole-to-pole connectivity coverage with LEO, MEO, GEO Satellite connectivity
- Automatic WAN encryption with intelligent routing and comprehensive visibility
- Cloud connectivity combined with assured security from edge to cloud  
Next-Generation Firewall, Secure Web Gateway, Network Detection and Response
- Integrated, layered security with detection and protection against cyberattacks strengthens your defenses

## Key Benefits

- Integrated hybrid SASE services; including SD-WAN, App Optimization, FW, SWG, SEG, CASB and MDR, EDR and NDR
- Integrated services that can be delivered on-premises as well as in the major public clouds such as Azure and AWS
- Application and identity aware; integrates with cloud identity providers
- World-class NOC and SOC services
